

RLC TESTER

For GRAD start engine production

RLC tester for the ignition system of the GRAD rocket engine

- The tester is designed for performing incoming and outgoing inspections of the ignition system of the 122mm GRAD rocket.
- The components of the built-in filter, consisting of two inductors of 33 μH each and a 47 nF capacitor, are tested.
- As part of the outgoing inspection, after final assembly, the two igniters are tested with a safe current.
